

	<p>In gray, possible grades for the course for each element. The final grade takes into account all the elements.</p>					
	F	E à C-	C	C+	B- à B+	A- à A+
0. Uncompleted elements (assignments or project)						
1. All assignments completed with success						
2. Project minimum variant						
2.1 Project description			Incomplete.	Complies with instructions.	Correct and consistent with the modeling. Originality and good quality of exposition give higher grade.	
2.2 Modelling			Incomplete.	Complies with instructions.	Correct and consistent with the algorithms. Clear and well-explained notation give higher grade.	
2.3 Algorithms			Incomplete.	Complies with instructions.	Correct and clearly described (for example with equations and / or pseudo-code) and consistent with results.	
2.4 Results and analysis			Incomplete.	Complies with instructions.	Correct solutions (or clear analysis of why they are not correct), clear and relevant analysis of well chosen measures. Comparison of algorithms. All consistent with the output of the code. Effective algorithms, good quality of exposition and of results analysis give higher grade.	
2.5 Conclusion			Incomplete.	Complies with instructions.	Correct et relevant with respect to the report. Good quality of exposition give higher grade.	
2.6 Other parts (instructions, references, self assessment)			Incomplete.		Complies with instructions.	
2.7 Code			Incomplete.		Complies with instructions.	

	In gray, possible grades for the course for each element. The final grade takes into account all the elements.					
	F	E à C-	C	C+	B- à B+	A- à A+
3. Project "advanced" variant						
3.1 Problem description			Incomplete.	Complies with instructions.	Correct and consistent with the modeling. Originality and good quality of exposition give higher grade.	
3.2 Modelling			Incomplete.	Complies with instructions.	Correct and consistent with the algorithms. Clear and well-explained notation give higher grade.	
3.3 Algorithms			Incomplete.	Complies with instructions.	Correct and clearly described (for example with equations and / or pseudo-code) and consistent with results.	
3.4 Results and analysis			Incomplete.	Complies with instructions.	Correct solutions (or clear analysis of why they are not correct), clear and relevant analysis of well chosen measures. Comparison of algorithms. All consistent with the output of the code. Effective algorithms, good quality of exposition and of results analysis give higher grade.	
3.5 Conclusion			Incomplete.	Complies with instructions.	Correct et relevant with respect to the report. Good quality of exposition give higher grade.	
3.6 Other parts (instructions, references, self assessment)			Incomplete.			Complies with instructions.
3.7 Code						Complies with instructions.
3.7 Poster			Incomplete.		Reflects all parts of the report. A good quality and clear synthesis give a higher rating.
